<div align="center">
    <h2 class="text-center">About Us</h2>
    <table width="75%" border="0"  BORDERCOLOR=BLUE  border-spacing: 15px; >
       <tr>
          <td>
             <b>This website is a prototype. It was created for the intention of
learning new computer langauges.
```

I have learned to code with HTML, CSS, Php, SQL, and Javascript. My hope is that
whoever enters my temporary website can learn from the code I used.

In this website I learned many interesting things:

```

            <a class="helpHeadings3">Radio buttons / Checkboxes</a><br>
Buttons are crucial for any website. Listed below are some reasons for this:<br><br>

                <!--
********************************************************************************
**
                *
                    *
                *    Buttons allow users to interact with website
                    *
                *
                    *

********************************************************************************
*** -->

            <ol class="c">
                <li>Buttons are a way for users to interact with a website. Why is
this important? It keeps the user engaged, thus the user will more likely stay on
the website.<br><br>

                    <!--
********************************************************************************
**
```

            Buttons allow users to select what they want in the website.
Why is this important? Usually, a user has a specific purpose when entering a
website. There should be a button or perhaps a series of buttons that can allow the
user to fulfill their purpose on the site.

                    <!--
****
**
                    *
                        *
                    *   Buttons can allow the creators of the site to know which
button is the most popular *
                    *
                        *

****
*** -->

            Buttons can also allow the creators of the website to know
which button is the most popular among users who enter the website. This is
important as the button that is most used by users should be repositioned in a place
readily accessible in the website

                    <!--
****
**
                    *
                        *
                    *   Buttons can be used to create polls
                        *
                    *
                        *

****
*** -->

            Buttons are an excellent way to create polls within a website.
Polls can allow the creators of a site to know what most users would like to have in

the website.

```
        <!--
